

### **Legal and ethical aspects of AI**

MUIA graduates will have to address in their careers a number of professional challenges not strictly related to their technical skills, but to knowledge domains such as Law or Ethics. Everyday duties of a computer scientist include dealing with data protection or intellectual property, and knowing the basics in these domains is a must. Also, every well educated person should be able to assess the impact of a project or an endeavor from an ethical point of view. However, professionals dealing with specific problems on artificial intelligence or data science will have to face these situations more often and more important.
